We are the event industry's **hot ticket**

We are the education sector's new **teacher's pet**

We are here to open up the office to **everyone**

Talk freely

XRAI Glass is built with your enterprise security and privacy in mind.

All conversations are stored directly on the user's phone, behind your corporate ID, you're in control.

Behind the glass

01

Users sign in using their preferred account, while enterprise customers have the option to use a custom OpenID provider. Enterprise users benefit from custom policies for a tailored experience.

The subscription is validated, and a set of entitlements (features) are unlocked based on your enterprise agreement. Your company name and details are stored in the XRAI EU HubSpot instance.

02

Audio is captured from all around the user by onboard mics, Bluetooth mics, or mics within the glasses.

03

This audio is processed by an application running on the user's device. We support iOS, Android, Windows and Mac.

04

When using local transcription, the audio stream is sent in real-time to an AI model running on the device.

05

When using Cloud enhanced transcription, the audio stream is sent in real-time to your Cloud of choice and just the transcription is returned.

06

All sensitive data is only stored locally on a user's device, protected by the login they originally utilized.

07

Subtitles are displayed on the phone and glasses in real-time.
